## **About This Study**

To better understand the economic and operational conditions in dental practices and public health clinics over time, and to measure the impact of the COVID-19 pandemic and other emerging issues in dentistry, the ADA Health Policy Institute launched a tracking poll in January 2022. For this initial wave over the week of January 17, 2022, we invited nearly 80,000 dentists from across the U.S. to join a panel in which they will complete a survey once a month; nearly 2,000 have opted to participate. The number of respondents in each wave, along with the number of responses in each reporting category in the current wave, can be found at the end of this report.

Below are the results from the first wave of this study, for dentists working in private dental practices. The report includes breakouts by ownership status, DSO affiliation, practice size, geographic location, sex, age group, and race/ethnicity. Unless noted otherwise, charts reflect the results from the latest wave of data collection.

This report was published in January 2022 by the American Dental Association's Health Policy Institute.
