

About this Study

To better understand the economic and operational conditions in dental practices and public health clinics over time, and to measure the impact of the COVID-19 pandemic and other emerging issues in dentistry, the ADA Health Policy Institute launched a tracking poll in January 2022. For this initial wave over the week of January 17, 2022, we invited nearly 80,000 dentists from across the U.S. to join a panel in which they will complete a survey once a month; over 3,000 have opted to participate.

The survey for the week of November 13, 2023 was sent to 3,306 panel members; 1,041 responded, for an adjusted response rate (excluding undeliverable email addresses) of 31.5%. The number of dentists by specialty and practice setting can be found at the end of this report.

This report features results from the latest wave of this study broken out by the following practice areas/specialties:

- General practice (GP)
- Pediatric dentistry (PED)

Additionally, results are reported for dentists that practice in public health settings (DiPHS), regardless of specialty. (Please note that this group should not be confused with dental public health specialists.) **Please note that we only include graphics representing at least 30 responses.** Because of this, we were not able to include results for the following specialties in this report: oral and maxillofacial surgery, endodontics, orthodontics and dentofacial orthopedics, periodontics, prosthodontics. The number of respondents in each practice area/specialty can be found at the end of this report.

This report was published in November 2023 by the American Dental Association's Health Policy Institute.
